## NOVEMBER 2022 RELEASE

### ANALYSIS SUMMARY

The new Analysis Summary expands the previous Coefficients Table with more model-fit statistics. Easily view p-values, R-squares, model equations and more, across all responses.

### CUSTOM GRAPHS

The Graph Columns node has been upgraded to Custom Graphs. You can now plot analysis data like predicted values and residuals –plus distinguish points by size and symbol.

### SHADED INTERVALS

Prediction, confidence, and tolerance intervals can now be set to “shaded” to color the bands, thus creating a far better view of the uncertainty around the fitted response.

### HOSTED LICENSE OPTION

A new licensing option is available to host a network license at statease.com. This allows you to run the software on multiple devices without requiring an on-premises license server, thus reducing costs for DIY software deployment and management.

### EXCEL IMPORT/EXPORT

Added by popular request! Users can now seamlessly connect with Excel to transfer factor levels and response data.

### BLOCK ANALYSIS

Blocks can now be treated as random as well as fixed block. This facilitates more precise statistical analysis for uncontrolled variables such as lot-by-lot or day-by-day.
